

## HEALTH INNOVATION - An Interdisciplinary Approach, 5 credits

### **Are you interested in learning about health innovations and how your knowledge, skills and ideas can improve and develop health care?**

The course targets students, PhD students and **professionals** from different disciplines and educational programmes. The interdisciplinarity is important for the course and for the outcomes! The course will run once a week in late afternoons from February until May 2019 consisting of lectures and workshops.

The course will be divided in three parts:

**The innovative group:** foundations of innovations, group dynamics, leadership and design thinking to create ideas.

**The innovative society:** history of health innovations, evaluation of innovations, implementation of innovations and the legal challenges of innovations.

**The innovative organization:** funding of innovations, protection of innovations, examples of successful innovations and pitching your idea.

*If you want to go fast - go alone  
If you want to go far - go together!*
